Summary

Data Analyst and Machine Learning enthusiast with strong skills in Python, SQL, Excel, and data visualization. Experienced in data analysis, predictive modeling, and transforming complex datasets into meaningful insights and data driven solutions.

Skills

Languages: SQL, Python, Java

Data Visualization Tools: Data Cleaning, EDA), Excel, Matplotlib, Seaborn, Pandas, NumPy

Machine Learning & AI: Machine Learning models, NLP, PyTorch, Scikit-learn, OpenCV

Backend & APIs: REST APIs, Spring Boot

Cloud & Deployment: Basic knowledge of AWS, EC2

Experience

Machine Learning Intern

May 2025 – July 2025

Sentiment Analysis of Movie Reviews(Remote)

Python, NLP, SQL

- Processed and analyzed 10,000+ movie reviews using Python, Pandas, and NLP techniques for sentiment classification.
- Implemented text preprocessing pipelines including tokenization, stemming, stopword removal, and TF-IDF vectorization.
- Trained and evaluated 3+ machine learning models using Scikit-learn to identify the most effective sentiment classifier.
- Performed exploratory data analysis and feature engineering to improve model performance and data quality..
- Used SQL queries to integrate structured metadata with machine learning datasets for enhanced analysis.

Projects

BlinkBoard– AI Eye-Tracking Virtual Keyboard | *Python, OpenCV*

March 2025 – May2025

- Developed a real-time AI-powered virtual keyboard with 40+ interactive keys, enabling hands-free typing through eye gaze tracking and blink-based key selection.
- Implemented computer vision pipelines using OpenCV, Dlib, and 68-point facial landmark detection to track eye movements and estimate gaze position in real time.
- Designed gaze estimation and blink classification algorithms using image thresholding, contour analysis, and frame-based processing, supporting continuous real-time cursor navigation across an 800×500 pixel virtual keyboard.
- Optimized gaze smoothing, blink validation, and eye-position mapping techniques, reducing false key selections and improving overall typing accuracy and accessibility for hands-free interaction.

AutoMail– AI Email Response Generator | *Spring Boot, REST APIs*

September 2025 – November 2025

- Developed an AI-powered email response generation system using Google Gemini API and Spring Boot, automating email drafting and reducing manual response creation time by approximately 70%.
- Designed RESTful APIs and structured backend workflows for real-time AI response generation.
- Engineered prompt variations to generate personalized, tone-based email replies, improving response accuracy by 35% and reducing manual effort by 5 hours weekly.
- Built scalable API integration using Spring WebClient, reducing external API communication overhead and improving response efficiency by 25%.
- Added response sanitization and processing logic to improve generated output quality and usability

Awards & Certifications

- **Video Analytics using OpenCV and Python:** Learned image processing, thresholding, object detection, and computer vision fundamentals using OpenCV.
- **Machine Learning Internship:**Worked on sentiment analysis using Python, NLP, SQL, Scikit-learn.

Education

B.Tech in Computer Science and Engineering

Graduated: 2026

Jaypee University of Engineering and Technology, Guna
